

Gibbs Cartridges

This is the entire book on Cd-rom in PDF format. A computer is required to read this book. The Gibbs line of wildcat cartridges has aroused curiosity since the mid-1960s. Handloaders expound and argue the velocity claims and cartridge designs of Rocky Gibbs. Gibbs developed his interest in handloading while a member of the Richmond, California, Rod & Gun Club. His competitive nature led to an intense desire to produce a cartridge that was bigger, better, faster and more complete than any other. He was severely criticized for his cartridge case design. Nearly everyone complained about the minimum length of the case necks. Gibbs was also accused of inflating the Gibbs cartridge velocities. He was willing to risk his reputation to prove he had maximized the available space in a .30-06 case. When it comes to velocity, a Gibbs chambered rifle with a standard barrel makes a magnum with a short barrel just another rifle.
