

## Thin-layer Chromatographic Rf Values of Toxicologically Relevant Substances on Standardized Systems: Report (Report 7 of the DFG Commission for Clinical-Toxicological Analysis)

This book compiles reliable and comparable Rf values on some 1100 toxicologically relevant substances in ten standardized thin-layer chromatography systems. Among the substances analyzed are drugs, illicit products, pesticides, metabolites, and endogenous compounds. This compilation is the result of co-operation between the Systematic Toxicological Analysis Committee of the International Association of Forensic Toxicologists and the Senate Commission for Clinical-Toxicological Analysis of the German Science Foundation.
