

Abridged scientific publications from the Research Laboratory of the Eastman Kodak Company Volume 1-3

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1914 Excerpt: ...three classes: (1) those which attack the highest densities most, typified by persulphate; (2) those which cut the lowest densities to a greater degree, such as ferricyanide-hypo; (3) so-called proportional reducers, that is, those which remove the same proportion of all densities. Nearly all reducers resembled those of class 2, except persulphate and Decks. The latter gave approximately proportionate action, but was improved by a modification of the formula. Fifteen different reducers were tried, most of them taken from the British Journal Almanac for 1916. These were ferricyanide, persulphate, permanganate, BeJitskis, Eders, iodine-potassium cyanide, bichromate, Decks, and several other mixtures of permanganate or bichromate with persulphate. Sensitometric strips were exposed, developed and reduced under accurately controlled conditions. Seed 23 emulsion coated on patent glass to minimize errors due to uneven coating was used for most of the experiments. For studies concerning the effect of grain size and of the developer used tests were also made on Seed Process and Seed 30, as being representative of low and high speed emulsions. Development was carried out in metol-hydroquinone in a thermostat at 20 C. Each strip was somewhat overdeveloped; that is, to a greater degree of contrast than is usually desirable, and was then read on a Koenig-Martens photometer, ordinary H. & D methods being applied to the data. The strips were then reduced Note: Since these results were published some attention has been again drawn to the action of sodium hypochlorite as a reducer. Application of the methods just described show that it is also nearly

proportional in its action. 1. Australasian Photo-Review, June, 1916. Published: Brit. Journ. Phot., Oct. 27, 1916. ...
