It also describes the great challenge of the elaboration of gluten-free products of high quality and less expensive than the products at present available in food stores. The authors are recognized investigators and active the field of gluten-related disorders and the evolution of gluten-free products. Both fields of knowledge are essential for the patients, the physicians and the food industry. If we want to benefit from the recent advances made in the different fields, to improve the quality of life of patients, a common platform is crucial.
