

Developing Professional Knowledge And Competence

This volume analyzes different types of knowledge and know-how used by practising professionals in their work and how these different kinds of knowledge are acquired by a combination of learning from books, learning from people and learning from personal experience.; Drawing on various examples, problems addressed include the way theory changes and is personalized in practice, and how individuals form generalizations out of their practice. Eraut considers the meaning of client-centredness and its implications, and to what extent professional knowledge is based on intuition, understanding and learning. He considers the issue of competence versus knowledge and the effect of lifelong learning on the quality of practice.
