

The Female Infertility

About 40- 45% of the causes of infertility in a couple are due to the woman, a very similar percentage is attributed to man, in the remaining 10 - 20% of cases are situations where it is not just the cause, namely the so-called unexplained infertility. There are many causes of female infertility that will be described inside, analyzing their different aspects. However, remember well, later you decide to have a child, greater the time when all the causes of infertility (endometriosis, infections, etc.) may affect the female reproductive system. When you were young at twenty, in fact, the causes of female infertility have not had the time for their establishment. With age, especially after thirty-five years there is a rapid deterioration of the oocytes in the ovaries both in number and quality. In particular, in the chromosomes of the oocytes increase greatly abnormalities (aneuploidy) and the embryo that forms often do not implant or aborts early. That's why often, also with in vitro fertilization, you cannot easily obtain the desired pregnancy.
