

Intellectual Disability: Definition, Classification, and Systems of Supports (11th Edition)

This Manual contains the most current and authoritative information and knowledge on intellectual disability, including best practice guidelines on diagnosing and classifying intellectual disability and developing a system of supports for people living with an intellectual disability. Written by a committee of 18 experts, *Intellectual Disability: Definition, Classification, and Systems of Supports* (11th edition) is based on seven years of work on: (1) a synthesis of current information and best practices regarding intellectual disability; (2) numerous reviews and critiques of the 10th edition of the AAIDD definition manual; and (3) feedback from the field regarding a series of articles published by the Committee. This is the first official AAIDD definition manual with the terminology *Intellectual Disability*.

INTRODUCING THE WORLDS MOST PROGRESSIVE DEFINITION AND CLASSIFICATION SYSTEM The AAIDD System is based on an advanced view of disability and the belief that providing proper supports will enhance the functioning of a person with an intellectual disability. While intellectual functioning, adaptive behavior, and age of onset remain the criteria for evaluating intellectual disability, supports remain the cornerstone of the AAIDD Definition System. AAIDD believes that once a diagnosis of intellectual disability is made, planning and providing supports is the key to reduce the mismatch between a persons capabilities and the skills, and what is required to successfully participate in all aspects of daily life. The focus on individualized supports and the optimism inherent in the AAIDD System allow professionals to plan progressive services and enhance the quality of life of people living with an intellectual disability.

ABOUT THE AUTHORS The AAIDD Ad Hoc Committee on Terminology and Classification consists of 18 world-renowned experts in disability, medicine, special education, and law.
