

Deep Time, The Ancient Universe and Earths Fate

One question that continues to be a philosophical challenge is - what is the nature of time? Did time slide into existence along with the universe from another dimension(s) at the time of what we simplistically recognize as the Big Bang? If not, then was there a time before time? If time started, will it end? What happens if time stops? Are these questions even scientifically valid or are they just stupid? Is it possible to travel into the future? How did this universe come about. What will happen to planet earth and its inhabitants in the near and remote future? This essay addresses these and other issues.
