

Risk Analysis IX (Wit Transactions on Information and Communication Technologies)

Containing papers presented at the 9th International Conference on Computer Simulation in Risk Analysis and Hazard Mitigation, Risk Analysis IX covers an important area of current research interest with many practical applications. The book is concerned with all aspects of risk management and hazard mitigation, associated with both natural and anthropogenic hazards. The analysis and management of risk and the mitigation of hazards is of fundamental importance to planners and researchers around the world. We live in an increasingly complex society with the potential for disasters on a worldwide scale. Natural hazards such as floods, earthquakes, landslides, fires and others have always affected human societies. Man-made hazards, however, played a comparatively small role until the risk of catastrophic events started to increase due to the rapid growth of new technologies. The interaction of natural and anthropogenic risks adds to the complexity of the problem. Topics covered include: Risk assessment; Risk management; Hazard prevention, management and control; Early warning systems; Risk mapping; Natural hazards; Disaster management; Vulnerability assessment; Health risk; Debris flow and flood hazards; Case studies; Climate change; Safety and security; Evacuation simulation and design; Political and economic vulnerability.

A Disaster Severity Assessment Decision Support Tool - WIT Press This paper presents a Fuzzy Consensus Qualitative Risk Analysis framework to identify WIT Transactions on Information and Communication Technologies. **WIT Transactions on Information and Communication Technologies** Application Of A Flood Risk Model To The Thames Estuary For Economic Benefit Assessment.
