

The Provincial Archaeology of the Assyrian Empire

The Assyrian empire was in its day the greatest empire the world had ever seen. Building on the expansion of the Middle Assyrian state in the late second millennium BC, the opening centuries of the first millennium witnessed a resurgence which led to the birth of a true empire whose limits stretched from Egypt to Iran and from Anatolia to the Persian Gulf. While the Assyrian imperial capital cities have long been the focus of archaeological exploration, it is only in recent decades that the peripheral areas have been the subject of sustained research. This volume sets out to synthesise the results of this research, bringing together the outcomes of key investigations from across the empire. The provincial archaeology of the empire is presented in a new light, with studies of the archaeological imprint of Assyria in present-day Israel, Iran, Iraq, Syria and Turkey. A wide range of methodological and interpretive approaches are brought to bear on the data. Analyses of environmental zones and ecofactual datasets, material culture and architectural traditions, the permeation of literacy and the use of para-literate systems form the platform for innovative and integrative evaluations and lead to a new appreciation for the diversity of local responses to the Assyrian expansion.
