

## Relativity The Special and General Theory (Classic Reprint)

The following computer-generated description may contain errors and does not represent the quality of the book. Relativity to those readers who, from a general scientific and philosophical point of view, are interested in the theory, but who are not conversant with the mathematical apparatus of theoretical physics. The work presumes a standard of education corresponding to that of a university matriculation examination, and, despite the shortness of the book, a fair amount of patience and force of will on the part of the reader. The author has spared himself no pains in his endeavour to present the main ideas in the simplest and most intelligible form, and on the The mathematical fundaments of the special theory of relativity are to be found in the original papers of H.A. Lorentz, A. Einstein, H.Minkowski published under the title Das Relativitätsprinzip (The Principle of Relativity) in B.G. Teubner collection of monographs Fortschritte der mathematischen Wissenschaften (Advances in the Mathematical Sciences), also in M.Lane's exhaustive book Das Relativitätsprinzip published by Friedr. Vieweg Son, Braunschweig. The general theory of relativity, together with the necessary parts of the theory of invariants, is dealt with in the author's book Die Grundlagen der allgemeinen Relativitätstheorie (The Foundations of the General Theory of Relativity) Joh. Ambr. Barth, 1916; this book assumes some familiarity with the special theory of relativity. This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally-enhance the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections

successfully; any imperfections that remain are intentionally left to preserve the state of such historical works. Tags: relativity theory body time space motion system law velocity gravitational relative light field principle ordinates respect ordinate points distance transformation
