

Reminiscences: A Journey through Particle Physics

A personal recount in areas of particle physics and related fields as a research physicist for over 50 years, Adrian Melissinos insights into the ways that general research was carried out, as well as the evolution of particle physics from 1958 to 2008 will prove valuable to science history enthusiasts, as well as particle physicists. Be it conventional accelerator experiments, the use of microwave techniques in search of cosmic axions, or taking advantage of high power lasers to observe light-by-light scattering, the excitement of searching for something new in the face of failures and then successes is enriching, and the collaboration with gifted and outstanding colleagues and students proves insightful. A hybrid of personal reminiscences and a professional journey, readers get to relive the joy and excitement of researching and teaching in small groups during those early years while gaining a partial historical perspective of particle physics since 1958 all in Reminiscences: A Journey through Particle Physics. Interview with Professor Melissinos Contents: Level Crossing Strange Particles Deep Inelastic Scattering The Rising pp Total Cross Section Dimuons and Trimuons The Cornell B-Factory Fourteen Orders of Magnitude Axions Lasers Matter From Light Photoinjectors The Earth Tides Readership: Research physicists and students, as well as scientifically-inclined general public, such as readers of Scientific American.
