

Smart Company: IT for the enterprise 4.0

Developments in the IT changes business processes and business models rapidly and create huge challenges for almost every company. However, smart companies that understand these developments as an opportunity, provides them a huge competitive advantage. A systematic change of IT and ultimately of the company itself towards a smart company based on the presented development model can minimize the risks of this change. This book gives an overview of challenges in this new and changing business environment and concepts for a structured transformation of IT in this new, central role. In addition to executives and IT decision-makers this book can serve all those as a tool, who are involved in the strategic and operational development of business and IT.
