

Integrated Soil and Water Management For Orchard Development: Role and Importance (FAO Land and Water Bulletins)

This publication contains the proceedings of an international seminar held in May 2004 at the University of Teramo (Italy). It discusses the role and importance of integrated soil and water management in orchards (vineyards and olive orchards) and it is intended to highlight the better use of resources. This publication will contribute to raising awareness of the possibilities for the better use of rainwater and improved management of soils with reduced erosion. It will be useful to anyone concerned with maintaining and improving the quality of soil including farmers, researchers, advisory staff, consultants and technical decision-makers.
