

Globalisation, Convergence And European Telecommunications Regulation

This book provides an up-to-date account and analysis of the development of the European Unions regulatory framework for telecommunications in a globalising world. A key feature is its treatment of the EUs regulatory policy response to technological convergence in the information and communications sector, through its new Electronic Communications Regulatory Framework. The book explores in detail the dynamics of the complex relationship between technological and globalisation pressures, economic interests, and European and national policy responses. The authors also examine the achievements and limitations of over twenty years of EU efforts to liberalise markets and to harmonise regulation.
