

The Journal of Geology, Vol. 4 (Classic Reprint)

Topography. The most characteristic features of South African topography appear to be its table lands. The interior of the country is in great measure a vast extent of high plateaux the Hooge Veldt which, though grassy, are practically treeless and present much the same aridity and desolateness of aspect as many of our western mesas. A long the coast, especially on the south and east, is a belt of country of a generally lower level, which is more rugged and broken, but even here plateaux occur, sometimes on the very coast, as, for instance, the well-known Table Mountain near Capetown. As one leaves the coast to go into the interior the country becomes more mountainous, often rising into considerable ranges like the Drakensberg range, which runs parallel to the southeast coast and has peaks rising to elevations of 10,000 feet or more. Read before the Geological Society of Washington, November 13, 1895. Authorities Consulted in the Preparation of the Present Paper. 1888. A. H. Green :Geology and Physical Geography of the Cape Colony, Quar. Jour., Vol. 44, pp. 239-270. 1889. A. Schenck :Verkommen des Goldes in Transvaal. Zeitsch. d. Deut. Geol. Gesellsch, Band XXL, pp. 573-581. 1890. W. H. Furlong :Geology of the Cape Gold Fields. Trans. Amer. Inst. Mg. Engrs, Vol. XVIII., pp. 334-348. 1891. W. H. Penning :A Contribution to the Geology of the Southern Transvaal. Quar. Jour., Vol. XLVII, pp. 451-463. Vol. IV., No. (Typographical errors above are due to OCR software and dont occur in the book.) About the Publisher Forgotten Books is a publisher of historical writings, such as: Philosophy, Classics, Science, Religion, History, Folklore and Mythology.
