

Affect Imagery Consciousness: The Complete Edition: (v. 1 - v.4)

...brilliant...--Malcolm Gladwell, Author of Blink Tomkins's magnum opus, *Affect Imagery Consciousness*, was published by Springer Publishing Company in four volumes over 30 years. When Tomkins began writing the book in the 1950s, American psychology was dominated by psychoanalytic and behaviorist theories--neither of which placed much importance on the role of basic emotions in everyday human behavior. Tomkins challenged the status quo by developing--over the span of more than 1000 pages--a theory of consciousness and motivation that placed emotion at the core of the human experience. Because so few psychologists were studying emotion at that time, Tomkins drew liberally from other academic disciplines to help formulate his ideas and support his arguments: evolutionary biology, ethology, cybernetics, literature, philosophy, psychoanalysis, and neurophysiology, among others. In the process, Tomkins practically invented the field of nonverbal behavior through close observation of emotional expressions in people, including his own infant son. His work was a brilliantly eccentric pastiche of ideas that adhered to no strict disciplinary or ideological boundaries. In time, however, AIC came to prominence through the research of his disciples, notably Paul Ekman and Carroll Izard, who went on to become major researchers in the psychology of emotion. Today, Tomkins's book is influential not just in psychology but in philosophy, sociology, communication studies, even in affective computing. Springer Publishing is delighted to re-release Tomkins's magisterial work in a beautiful new two-volume hardcover set, with a new prologue from prominent psychiatrist Donald L. Nathanson. The first volume of the set (978-0-8261-4404-1) contains the first two volumes of AIC, *The Positive*

Affects and The Negative Affects while the second volume (978-0-8261-4406-5) includes the final two volumes, The Negative Affects: Fear and Anger and Cognition: Duplication and Transformation of Information.
