

Is Google the Next Stage of Evolution of Life on Earth?

In this brief and incisive essay, financial asset manager Michael Cook presents his thesis for the thumbnail sketch of the evolution of life on earth: DNA, language, writing, printing, computers, the Internet, Google's search algorithm. Noting that the problem of information retrieval was becoming a roadblock to the continuing development of knowledge, Cook assigns to Google's Page Rank algorithm the genius of the solution-- the way it neatly sidesteps a very difficult semantic problem. The next generation of Web Search is yet to come! he writes, But the major breakthrough that made search results relevant was invented and engineered by Google.
