ELECTRIC LIVING – THE DANGER AND PROMISE OF ELECTRIC AND MAGNETIC FIELDS IN DAILY LIFE

Healing the soul, curing disease, powering space-flight, killing the planet, mutating our children, causing illness, warming our dinner or transporting us across the landscape at hundreds of miles per hour; magnetism and electromagnetism are at the center of many discoveries as well as currently raging controversies. This book provides a view of the unexpected uses and misuses of electricity and magnetism in daily life and surveys some of the mistakes weve made in the past - mistakes that have led to the demise of geniuses as well as the insanity and death of ship-bound sailors in secret military experiments gone bad. Finally, we discuss tools that you as the consumer can use to judge for yourself if magnetic fields are making you healthier or harm-ing you.
