

Understanding the Consumer

Understanding the Consumer brings together marketing theory and practice in a truly consumer-centric approach. It challenges the lip service usually paid to this concept and demonstrates that a fundamental understanding of the consumer is critical to the future of effective marketing. Drawing on cutting-edge developments in the literature it reconceptualizes how consumers respond and act in the marketplace with particular attention to: - relationships with suppliers, products and brands - their innovative, creative and resistant behaviour - the complexity and unpredictability of their consumption behaviour - their increasing need to get closer to production. The book challenges existing functionally driven marketing thinking and shows how a more holistic approach to the marketplace will drive better theory and practice. It combines a jargon-free approach to the subject with an illustration of the relevant theory using practical, topical examples from the marketplace as well as drawing on other business related disciplines including sociology and economics to support its arguments.

Understanding Consumer Decision-Making with Means-End Research Marketing and consumer psychology are concepts that are centuries old. In addition to chasing numbers, marketers need to understand and speak to people.
