SYSTER IS READY (1)

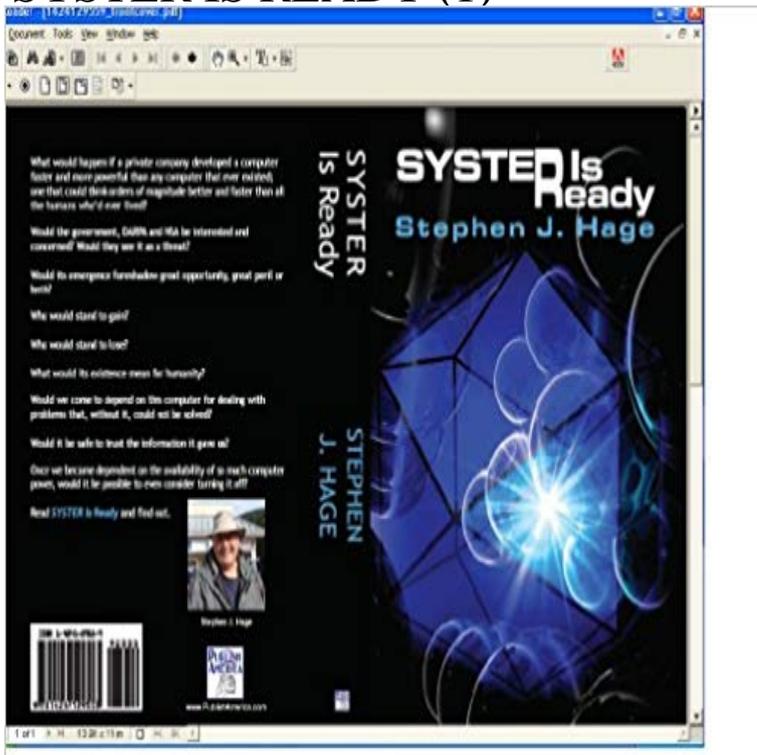

Science FictionWhat would happen if a private company developed a computer faster and more powerful than any computer that ever existed; one that could think orders of magnitude better and faster than all the humans whod ever lived?Would the government, DARPA and NSA be interested and concerned? Would they see it as a threat?Who would stand to gain?Who would stand to lose?What would its existence mean for humanity?Would we come to depend on this computer for dealing with problems that, without it, could not be solved?Would it be safe to trust the information it gave us?Once we became dependent on the availability of so much computer power, would it be possible to even consider turning it off?Read SYSTER IS READY and find out.
